Books at No Cost

Author: Hamid Ali

Author Biography

Hamid Ali is a student of English Language and Literature at the International Islamic University Islamabad (IIUI) and an experienced educator teaching remotely to students in the USA, Canada, and the UK. He has worked with institutions including YCC and Campus92 as an IELTS instructor and English and Science teacher. A former topper of APSACS College Attock (2022), he is also the founder of the IIUI Debate Council and a former business owner and freelancer. His literary and academic work includes the short story "A Day Below the Line" (published on ShortStoryLovers.com) and a booklet titled "Factual Shifts to Adventures," archived on the Internet Archive. He believes that digital education's adaptability will bring many forward and take others backward, depending on their beliefs.

Article

Save lives and get intellect without paying.

Entering the digital library saves millions of dollars. The 21st century has limited avid readers, which has shaped the global structure. Readers avoid reading due to the cost of books. A remedy is easy and application is limited. Digital reading is the process of reading through digital appliances such as phones, tablets, watches, digital glasses, laptops, LEDs, and computers. It provides coherence as a reader isn't stopped from reading due to the lights being turned off during the night. A stand can be used to set the phone in a desired place for reading. An auto-turning of the page can be applied to get a new page for reading after a specific time interval to optimize activeness. The criticism of new tools and application software is getting common, which has stopped progress. The top entrepreneurs and businessmen have a strong belief in technology and in the idea of it leading to success. "If you give people tools, and they use their natural abilities and their curiosity, they will develop things in ways that will surprise you very much beyond what you might have expected" (Gates, n.d.). The digital books need

structure for reading and the suppression of the negative agendas by the big printing companies. In order to bring the secrets of intellect through digital reading, it took 3 years of research, hard work, and the application of multiple ideas, which will be expressed in this article.

Three years and ownership of three E-learning companies and strong reading have concluded that the secret of knowledge is the result of reading in multiple dimensions. For the student of Harvard University, Massachusetts Institute of Technology (MIT), Stanford University, University of Oxford, University of Cambridge, or International Islamic University, Islamabad, taking education in two dimensions is the first secret. The first dimension is the strong use of AI to correct notes or any point during the lecture without disturbing the class. It requires multitasking, which can be done by listening to Harvard or MIT lectures on YouTube without any cost while writing on the same topic. It requires maximum focus in the beginning. Focus creates multitasking so sharp that it appears as if doing a single task. Warren Buffett and Bill Gates are known to have said “focus” when asked for a single factor as a major contributor to their success.

The second dimension of reading is strong imagination. Instead of thinking of the ideas, one should imagine them; even if it is a mathematical equation. It allows you to connect a whole paragraph into your memory as an idea or in the form of images, which is part of long-term memory. It has remained for a long time at the end of three years of experimentation. Digital book reading keeps the depression of social media out in the first place. Hormonal imbalance is decreased with book reading. It provides a sense of joy, which keeps you in tranquility for a long time. The sense of accomplishment allows one to excel in communication.

“Imagination is more important than knowledge. For knowledge is limited, whereas imagination embraces the entire world, stimulating progress, giving birth to evolution” (Einstein, n.d.).

Monarchical structure allowed people to buy books at a great cost. Books were in the hands of nobles. Today, objective justice has prevailed, but the subjective demands the right guidance. Objective structure means the outside structure allows you to read by providing you free books through digital libraries. Subjective justice is the human's will to start reading digitally. The importance of it can be recognized by the quote of AI: "In 1600, the British Crown's entire treasury—worth around five million pounds—could have bought no more than a few million books. Yet today, with a smartphone and an internet connection, anyone can access more knowledge than the wealthiest monarchs in history ever could."

As a rough estimate, every smartphone has access to 150 million+ books.

The professionals of education believe that true knowledge is self-learned. The practical application of knowledge creates billionaires. There are several quotes that make these points credible:

Bill Gates

"Read a lot and discover a skill you enjoy." (Gates, 2022, CNBC)

"Learning with kids is the ultimate test of whether you know a topic—whether you can explain it." (Gates, 2023, CNBC)

Warren Buffett

"If you are investing in your education and you are learning, you should do that as early as you possibly can, because then it will take time to compound over the longest period." (Buffett, n.d., Goodreads)

Elon Musk

"You don't need college to learn stuff. Everything is available basically for free. You can learn anything you want for free." (Musk, 2024, India Today)

"Don't confuse schooling with education. I didn't go to Harvard (a known educational institute) but the people that work for me did." (Musk, n.d., Goodreads)

So this article suggests digital reading as a modern survival skill to keep the wealth of creativity with humans rather than keeping it only with AI models. The costless article and the costless gains are for humans, who want to excel humanity in intellect with strong tools, mindset, and digital reading. These readings will generate ideas which will prevent the advanced crimes of the future. The only way to make it happen is the continuous stimulation and awareness of humans in all corners of the world.

The article ends with:

Business of cost

no ideas and a loss

Snow making the frost

bringing a big loss

Digital reading and no cost

brings the power to the toss

Applying the tools and rules

never comes again a chaos
